Energy Saving Heat Pumps

If you or your Business heat your office using oil or LP Gas, then already you will begin counting the cost of your heating.

We can't predict what the weather is going to be like next Winter, however we do know one thing - the price of all types of energy used for heating will be higher than today.

Did you know that there is an alternative?

Affordable renewable heating technology is readily available now and not only does it cost less than you think but, it genuinely can save you money on your heating bills.

Scrapping oil-fired boilers for a new heat pump driven hot water system drastically reduces energy costs.

A typical office can save up to £600 per 15kw of heating per year.

What's more, with Local Authority grants and Government grants and Tax Incentives available for installing approved technology, an investment in renewable energy systems will quickly pay for its self.

If you would like more information on Blackmoor Knight Ltd Renewable Solutions and how we can help you cut your costs and carbon footprint, contact us today.
